em-cadeia group presents:

photo manual

○

*I am seen
while I see
where I am not*

When taking your pictures, focus on your wall, not in the landscape, so that the structure does not become dark and shows better its color.

Frame the window in the photograph, it should be as centralized as possible, with all the lateral lines parallel to the cell phone.
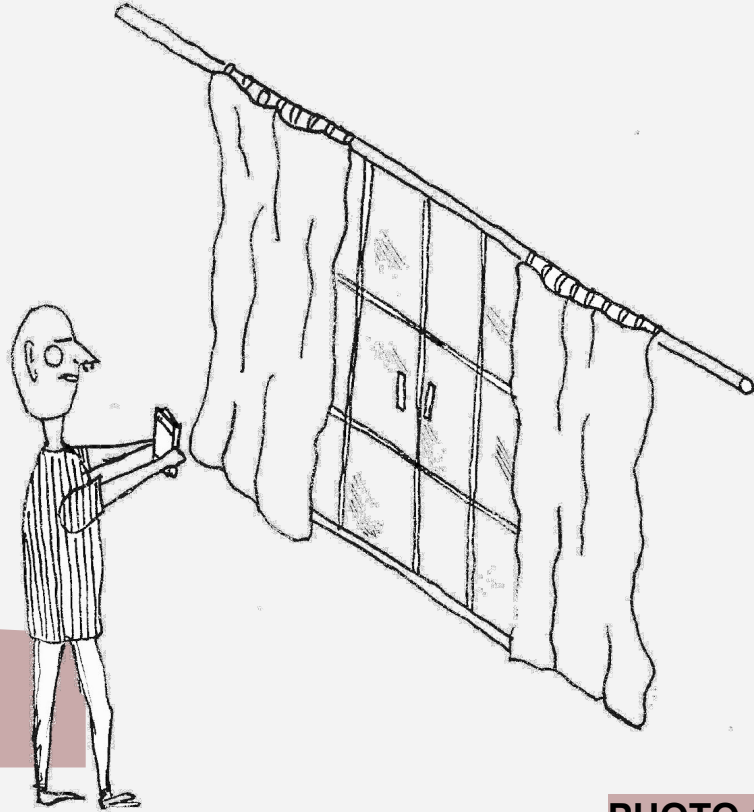

PHOTO 1: If your window has curtains, first take a photo of them both, framing all the elements in the photo. *(If it doesn't have curtains, go straight to photo 2)*
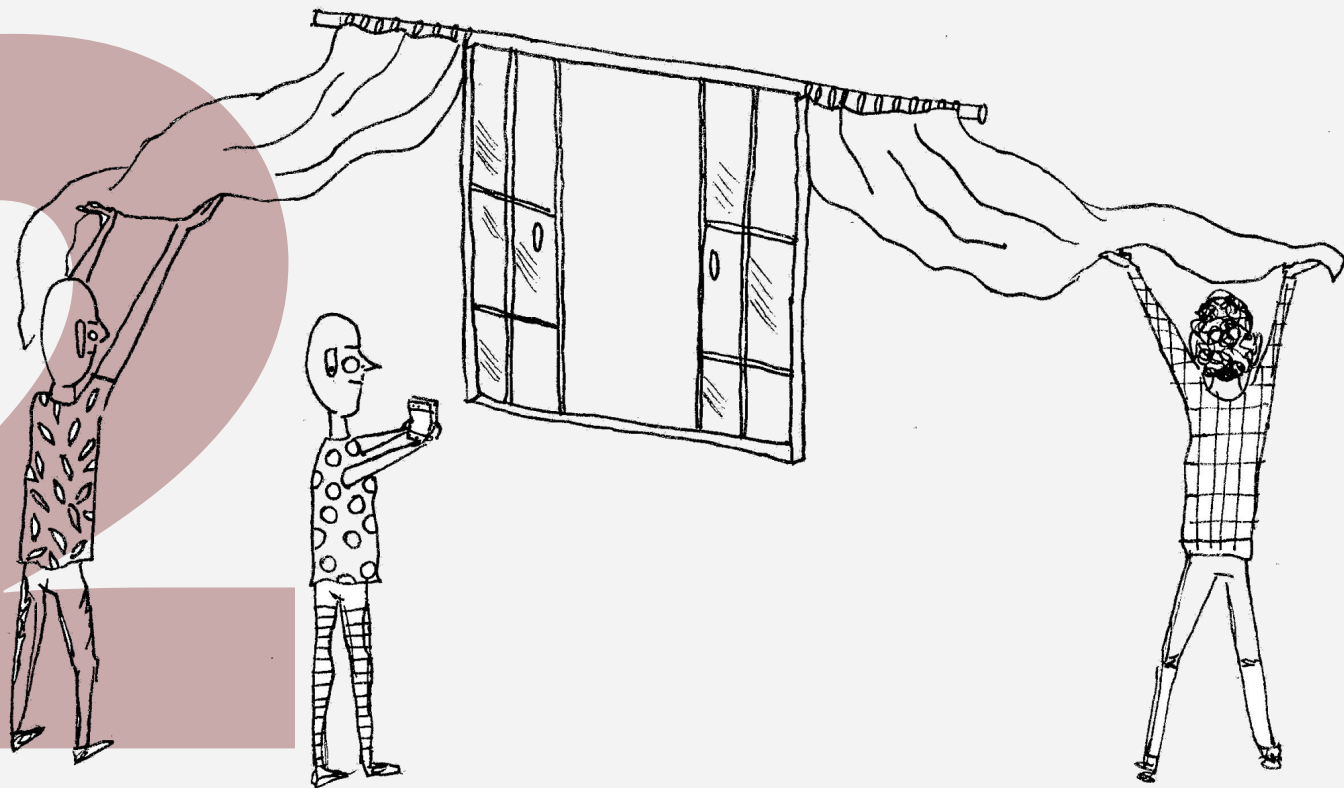

PHOTO 2: In the second picture, keep the curtains off, showing all your window's outlines.

PHOTO 3: The last picture is from the landscape as seen from your window. Point towards the horizon, WITHOUT showing your window's edges.
